

Summer Parasite Control

Fly & Lice Spot On & Dysect for Sheep

MEETING THE FLY CHALLENGE

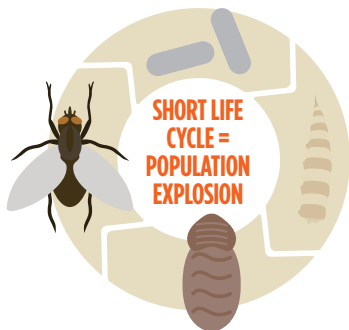

zoetis

Flies cause major economic production losses in livestock.

They reduce feed intake, reducing productivity, and damage fleeces.

Their life cycles are completed very quickly.

This gives rise to very rapid population expansion.

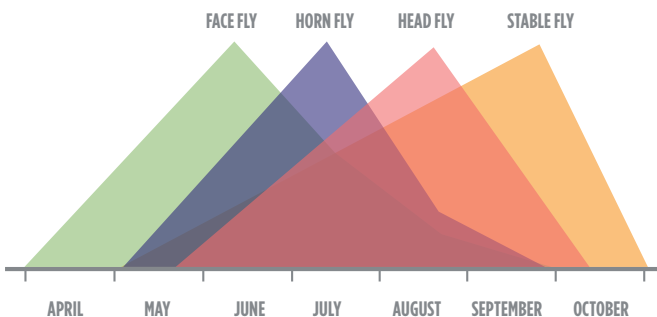

They attack, irritate and feed on sheep, cattle and other animals.

Flies can be involved in the transmission of diseases and blow flies are important due to the damage caused by their maggot stages.

A constant threat.

Waves of different species attack stock throughout the grazing season from early spring through to late autumn.

Fly & Lice Spot On for Sheep:

- For established blowfly strike
- One application directly to the infested area will kill blowfly larvae
- Reduces incidence of biting lice
- Controls ticks for up to **6 weeks**
- 5ml dose for all sheep, except lambs under 10kg (2.5ml)

FLY & LICE SPOT ON contains deltamethrin. POM-VPS
