

## Summer Parasite Control

Fly & Lice Spot On & Dysect for Cattle

# MEETING THE FLY CHALLENGE

*zoetis*

# The threat and the production benefits of good control:

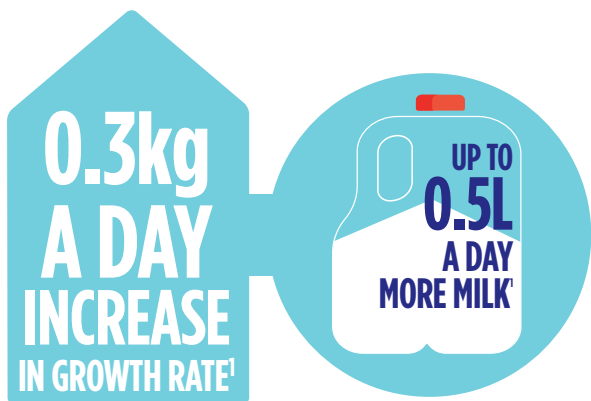

---

## Flies

Flies cause major economic production losses in livestock. They reduce feed intake, reducing productivity, and damage hides.

Their life cycles are completed very quickly, giving rise to very rapid population expansions, highlighting the need to apply fly control medicines early and regularly during the season.

**Effectively managing flies could result in 0.3kg a day additional growth and up to 0.5L a day more milk.**
