

ACTIGEN®

Diversifying the gut microbiome for healthier and stronger birds

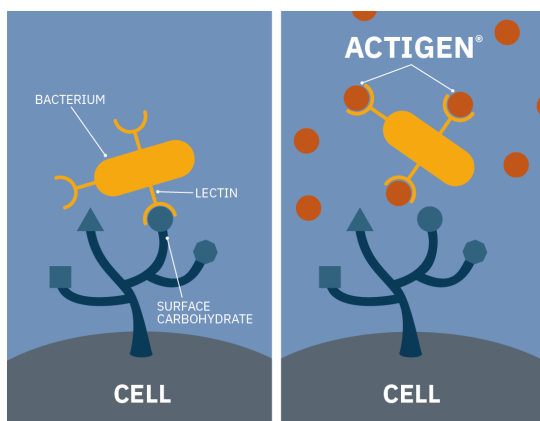

Actigen® is a yeast cell wall product derived from *saccharomyces cerevisiae*. When fed to birds it supports gut integrity and is key to building a foundation for performance and profitability in turkey production.

Actigen aids in reducing pathogen colonisation in the gut by:

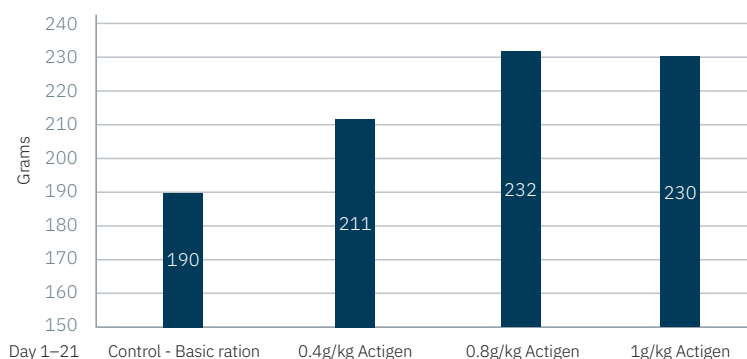

- Binding to pathogens
- Preventing attachment to the gut lining
- Removal from the digestive tract

It also stimulates the birds' natural defences, supporting overall gut health and allowing for optimal absorption of nutrients.

Better gut health and nutrient absorption has been shown in numerous turkey trials to improve body weight, feed conversion efficiency, and liveability.

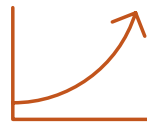

Improves live weight with Actigen

Key benefits of Actigen®

Improves gut health and overall health

Increases weight gain and liveability

Improves performance and efficiency

Contributes to a healthy immune status
